

COMPANY STATEMENT

Lynx Mining and Exploration Services is a multi-disciplined contracting and services company. We can provide tailored services including consultancy, personnel and contract services to the exploration and mining industries.

MISSION STATEMENT

Lynx Mission Statement:

We can provide a professional service which will cover the requirements that your project needs from the supply of contract personnel, hire equipment, vehicles, rehabilitation advice, rehabilitation services and soil sampling crews.

Our focus is to provide a personalised service to our clients that incorporates regular site visits to attend to any concerns and to receive feedback from our clients on any further scope that Lynx can provide.

"Lynx linking the resource industry with services and personnel"

Experienced staff

- Minimum Impact Drilling Advice & Rehabilitation Services
- Field Technicians
- Contract Geologists
- Project management services.

Equipment

- Camping equipment.
- Field consumables, GPS units.
- Vehicle Hire
- UTV Hire.

Safety is our priority

- Satellite Communications systems
- OH&S management systems.
- Prestart systems and operational procedures.

SERVICES

➤ Field Staff

Lynx will endeavor to supply the best suited people and will work with Exploration Project Managers to fill staffing requirements for both short- and long-term projects. Local labour will be targeted for each position where possible to reduce travel costs and project costs.

- Field Assistants - Senior, Basic and General labour available.
- Geologist - Experienced and Graduate Geologists available.
- Landholder liaison - experienced landholder liaison personnel.
- Camp cooks for remote areas.

➤ Project Management

Lynx has field staff with 10+ year's experience in managing exploration programs from the on-ground logistics, sourcing drilling companies to complete programs, supplying geologists and camp facilities.

➤ Soil Sampling

Lynx has 2 soils sampling crews available for contract soil sampling programs anywhere in Australia. Lynx has specialized in fully self-sustained remote areas soils sampling programs in NT, using UTV side by sides and 2 wheeled motorbikes if access is extremely bad.

With staff who are trained in the usage of UTV vehicles and full OH&S systems in place to create a high level of safety and communication during soil sampling programs.

- Satellite communications and tracking systems for employees.
- SOS systems for emergency situations.
- Lynx has developed daily check-in systems to ensure staff are safe.
- All spare parts for remote areas repairs and recoveries of vehicles if required.
- Ocris data collection systems are used for collection with data validation and photos of both sample sites and field observations.
- Data can be collected from the field every day if required and will be delivered in a digital format.
- Auger sampling available to a depth of 800mm if suitable ground.

➤ Hire Equipment

Lynx has a range of hire equipment available to assist with the completion of your exploration programs.

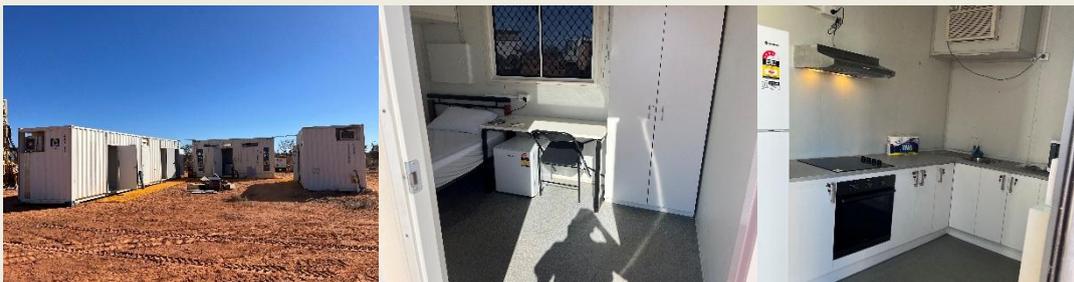

- Vehicle hire.
- UTV hire.
- Remote camping equipment.
- Surface Pro computers.
- Starlink internet

➤ Rehabilitation Services

Lynx has the capabilities to complete your drilling and access track rehabilitation in line with Government requirements. We can provide backhoes and graders with operators to complete all exploration earthworks. Lynx also has experienced environmental staff we can take equipment to site to prepare for drilling and to complete drill site rehabilitation, photos and reports to submit to the Government for sign off.

➤ Container Camps

Lynx has container camp facilities that can be delivered to sites, for longer term drilling programs, these camps will generally house 4 to 8 people with kitchen units, toilet blocks, donga accommodation and generators and or solar systems. We can also provide camp repairs and maintenance crews to visit camps prior to drilling programs.

➤ Auger Drilling

With auger sampling equipment available Lynx can provide services and staff to complete first pass auger sampling of your prospective tenements.

PROJECTS

Wollogorang Soils Project, NT

Lynx completed a soil sampling program in 2021 – 2022 which involved remote large scale soil sampling. The remote nature of this project meant that we were required to fly camp while sampling. Safety of the personnel was the priority for this project and GPS tracking systems and emergency management systems were developed to ensure this was the case. The Project was successfully completed over 2 years with around 14000 samples collected at 500m spacings through dense bush land.

Berry Springs Contract Labour, NT

Since 2018 Lynx has been the primary exploration field labour contractor to Core Lithium's Finnis project, with up to 14 field staff on site in 2023. Lynx has built a working relationship with Core to strive to provide the best field contract staff as well as providing services such as soil sampling to the exploration division of the Finnis project.

Low impact drill site setup & rehabilitation, SA

In 2017 Lynx staff carried out a minimum impact drill site setup and rehabilitation on sensitive high value farming land in South Australia. As part of the project Lynx provided the expertise, staff and materials required to set up drill pads on high value cropping land and rehabilitated the sites back to full crop production in the years after the project was completed.
